

Multi-layer Bag Filters

Multi-layer bag filters with either 2 or 3 layers can drastically reduce the overall filtration cost and be much more efficient in some applications.

Our multi-layer bag filters are available in BPONG and BPENG materials from 1 to 200 microns per layer, and BNMO material from 1 to 2000 microns.

It's also possible to mix different materials in 1 bag to get different filtration attributes in different parts of the bag.

Key Product Features

- Total customized on request
- Easy bag changing
- Contamination is kept inside the bag, thanks to the inside-out flow
- Welded construction of bags completely eliminates unfiltered liquid bypass from occurring due to needle holes
- 100% Silicone free to eliminate cratering for improved surface results
- Suitable within automotive
