

Plastic Cartridge Housing

101 Design

The 101 design cartridge filter housings are available for applications where materials such as stainless steel are incompatible with the fluid to be processed.

The 101 housings are fabricated in polypropylene and are designed to hold multi-stacks of filter cartridges. This range of housings are suitable for 3, 5, 10 or 15 stacks of filters up to 40" in length. This range offers additional flexibility by accepting either single open ended or double opened cartridges of 2.5" diameter.

Key Product Features

- Free standing house
- Easy to handle
- Flanged inlet and outlet connections

Very flexible housing

Polypropylene

6 - 10 Bar

40°C
