

IFAB Automatic Horizontal Design

The Horizontal Design offers a unique configuration of automatic self-cleaning water filters. Self cleaning water filters have a parallel flange configuration to accommodate simple installation.

IFAB design automatic water filter will integrate with any straight pipeline. The industrial water filters are distinguished by a two-stage screening process.

Each water filtration system contains a coarse screen and a fine screen. The coarse screen is responsible for straining out large debris from a water source. The fine screen purifies water to its designated quality. These automatic water filters provide solutions in a wide variety of industrial, irrigation, and municipal applications.
