

## IFAB BPLPE filterbags

IFAB BPLPE filter bag is made out of our standard filter bags of PP, PE or PA material.

The bag has an inner PE lining that ends about 15 cm from the bottom of the bag.

This makes the bag ideal for filtration with different masses, for example activated carbon and resin. The extra lining is forcing the liquid down through the mass and out in the bottom of the bag.

PE-lining inside bag

Size 1,2,3 and 4

1-1200

1.5 - 2 Bar

Polypropylene 95°C  
Polyester 150°C  
Nylon 160°C
