

Oil-adsorbing filter bags

Oil-adsorbent filter bag made out of polymicro fiber.

The microfiber filter bag provides outstanding performance on contaminant applications where minimizing particle travel is important.

The bag contains three layers: a pre-filtering layer that removes coarse debris; the primary layer, composed of micro pores (for efficient particle retention); and an outer cover that prevents fiber migration. The finish-free fibers are non-foaming, which is ideal for food, beverage, water, chemical and coating applications.

Key Product Features

- Proprietary polypropylene, triple-layer construction adsorbs hydrocarbons from air, gas and aqueous streams for clearer results.
- Outer cover prevents fiber migration to reduce waste.
- Non-foaming microfiber offers product cleanliness, high performance and longer service life.
- High void volume means longer service life, higher contaminant loading and reduced waste loads.
- Easy change-out reduces down time.

Oil-adsorbent

1 2 3 4 & Special

1-100 micron + OA
(OA includes an additional layer of oil removing material 25 micron)

1.5 Bar

Polypropylene 90°C
