

Cartridge

IFAB OilOut

Offering great efficiency, the OilOut from the IFAB filtration range has been improved to deliver 99% of hydrocarbon absorption.

Principally designed to effectively remove through absorption, dissolved and dispersed hydrocarbons efficiently from water, absorbing three times its own weight before changeout is required. As the cartridge becomes exhausted, flow is not affected and no hydrocarbons are released. Each pass through the cartridge removes up to 99% of hydrocarbons with each 10" cartridge having a capacity of 360g in standard size and 1290g in its large diameter (BB) format. The IFAB OilOut is best suited to applications with <500 ppm total hydrocarbons after coalescing or other such bulk removal, and as a cost effective polishing method.

Standard End-caps (Special End-caps available)

(Double open-end)

Code 0 (2-222 O-Ring)

Effective absorption

125 - 1016 mm

65 & 114 mm
